2411 San Pedro, San Antonio, TX 78212 

Collective investments in PK-12 STEM are critical to ensuring that students in San Antonio ISD are immersed in a 21st-century education rich in opportunities.

The SAISD Foundation and our partners invest in robotics, 3D printers, makerspaces, drones, eSports, and hydroponics. Through educator grants and broad initiatives, we are expanding access to relevant, dynamic STEM teaching tools that build critical skills. STEM activities also increase student engagement both in the classroom and through on-site after-school clubs. For many students and families, access to STEM programs outside of school can be difficult. However, with collective engagement, we can make high-quality STEM programs easily accessible.

In deep partnership with San Antonio ISD, we help ensure STEM-related curriculum and relevant training are available to SAISD teachers. Whether it is *Webots* or *Spheros* for our youngest learners or high-end computers to engage in high-tech coding and gaming through high school eSports, STEM programs provide students with marketable 21st-century skills and serve as gateways for high-demand STEM careers.

***You have a role to play in expanding student experiences!***

***Here's what your investment can do!***

**\$50** Filament for 3D printers

**\$100** Programmable Sphero robot

**\$200** Drone for a middle school classroom

**\$500** LEGO Mindstorm programmable robot

**\$750** eSports team jerseys

**\$1,000** Makerspace equipment
